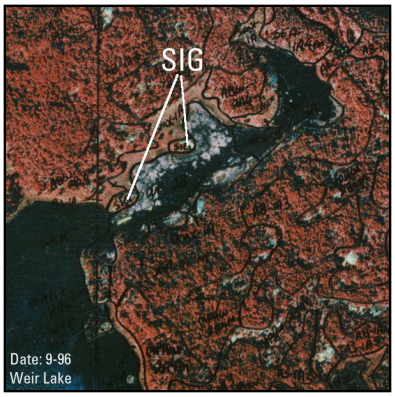
SIG - Small Island with Grass

The Small Island with Grass Map Unit (SIG) represents small upland islands that are dominated by grasses and forbs. These islands are >0.1 h in size, but less than the standard minimum mapping unit of 0.5 h. Trees and shrubs may be present, but at low cover (<25%). They are typically located within large open lakes, shallow bays, and herbaceous wetlands.

Two SIG polygons appear on this photo as an orange-red herbaceous layer. Deep and shallow wetlands surround these small islands.



Area Report for SIG Map Unit
Polygons: 11
Hectares: 1
Acres: 3
Average size: 0.1 hectares, 0.3 acres
