

Acadia National Park Vegetation Map Class for Open Headland – Beach Strand

The map class "[Open Headland – Beach Strand](#)" is composed of the following vegetation associations, each described separately:

- [Northern Maritime Rocky Headlands](#)
- [Sea-rocket - Oysterleaf Beach Vegetation](#)

The Open Headland - Beach Strand map class (SVH) is a sparsely vegetated map class (<25% total cover) occurring in patches in rock crevices of headlands, or on upper portions of beaches, just above the tidal zone. Polygons of SVH are typically linear, following the shoreline.
