

Ouray National Wildlife Refuge Vegetation Mapping Project

Baltic Rush Herbaceous Vegetation (Map Code 33)

Location: One patch of *Juncus balticus* Herbaceous Vegetation was observed in the large drainage near the Refuge entryway. *Juncus balticus* is only a minor component of some emergent wetlands within the Refuge.

No ground photo was taken.

Signature: The dark red with blue background signature for this type was similar to other low growing, emergent aquatics at Ouray. Due to its limited distribution and size this type was mapped exclusively by field verification.
