

Big Sagebrush Shrubland (Map Code 13)

Location: *Artemisia tridentata* ssp. *tridentata* Shrubland is known only from a small stand about 0.5 mi north of headquarters on Hatchery Road (the road divides the stand), a small stand in Johnson Bottom, and a larger stand in the northern portion of Brennan Flat.

Signature: This shrub type is similar to the greasewood shrublands but usually occurs in higher densities. Also the color of sagebrush on CIR photography is a darker, almost black but similar in size to the greasewood types. Texture is pebbled or finely mottled.
