

**Snakeweed – (Prickly pear spp.) / James' Galleta Dwarf Shrubland (Map Code 19)**

*Location: Gutierrezia sarothrae – (Opuntia spp.) / Pleuraphis jamesii Dwarf Shrubland occupies silty-clay soils and gravel and cobble beds, on relatively flat surfaces. The largest stands are located at the overlooks for Leota and Johnson Bottoms and west of SH 88.*

*Signature:* This type appears almost barren on the photos due to lack of substantial living vegetation. Colors on CIR photography range from blue to gray and usually have a brown or red tinge. Much of this type was mapped from field verification.
