

S-PRVT *Ligustrum japonicum* Shrubland Stand
Privet Shrubland Stand

Associations and Alliances

Local Stand (no NVC Alliance at this time)

Common Species

- Ligustrum japonicum*
- Acer negundo*
- Carya illinoensis*
- Celtis laevigata*
- Ulmus americana*
- Ulmus crassifolia*
- Toxicodendron radicans*
- Elymus virginicus*

Description

Privet stands occurred throughout uplands on the Missions Unit. Privet was found at SAAN in thick, lush stands that were relatively tall ranging from 3-5 meters. Only a few mappable stands were observed in the park but smaller, isolated patches may also exist. Since this is an exotic species, removal efforts may dramatically effect its distribution over time. On the color infrared imagery this type appeared as very dark red trees and shrubs intermixed with other deciduous trees.
