

## Voyageurs National Park Vegetation Map Class for Deep Marsh Mosaic / Complex

The map class "[Deep Marsh Mosaic / Complex](#)" is composed of the following vegetation associations, each described separately:

- [Eastern Reedgrass Marsh](#)
- [Freshwater Bulrush Marsh](#)
- [Midwest Cattail Deep Marsh](#)
- [Wild Rice Marsh](#)
- [Water Horsetail – Spikerush Marsh](#)
- [Northern Water Lily Aquatic Wetland](#)
- [Midwest Pondweed Submerged Aquatic Wetland](#)

This map unit was created to account for photo limitations and patterns of the vegetation on the ground. The photographs do not always show distinctive signatures between these associations, so mapping specific associations cannot be done confidently. Also, these associations often occur together in a mosaic pattern and fall below the minimum mapping unit of .5 ha., so they are not mapped as separate polygons.
